

Dear FCC, Please please pleas, do not all for broad band power line transmissions unless you make sure that there will be no harmful interference to the amateur hf bands!

I live in a housing tract that has underground power lines and I still have a noise level on hf that sometimes is as high as s9+10 haunts me every day. If there is additional noise added because of broad band power line transmissions I might as well kiss all my hard work to earn my extra class ham radio license good bye. Prehaps there could be some sort of notch filters used by the power companies that would protect the ham bands. I have been intending to upgrade my station but now I am waiting to see what will happen with this threat to ham radio.

Thank you for your time,

Berry Griffin
